environmental management

Taking pest control seriously is one of the ways you can best protect your business, brand, customers and reputation.

Pest Solutions UK, is part of the FoodSafe Group, specialist consultants in Food Hygiene and Safety, offering professional advice and practical support to businesses in any sector of any size.

Our team is made up of specialists who have hands on experience in senior management roles from within manufacturing, retail and enforcement. We understand the problems businesses face with strict legal requirements and the consequences if no action is taken.

We specialise in both one off treatments, ongoing consultancy and contract work providing integrated solutions combining biological, chemical and physical treatments. Residential or commercial, you can be assured of quality service and advice at affordable and competitive prices.

Our team can help you achieve significant savings by identifying and managing the root cause of a problem that reduces the need for repeat visits and continual treatment. Our key focus is on improving hygiene, general housekeeping improvements and proofing to deter pests, avoiding future call outs.

One-off treatments

When a pest problem has been identified, we can provide a rapid, personal service dealing with the problem quickly and efficiently. More importantly, we tackle the root cause of the problem to minimise further on-going call outs.

On-going contracts

We enjoy working with a great number of our clients as partners, ensuring our input to their business is comprehensive, efficient and hassle free.

Our team operates 24 hours a day, 7 days a week, 365 days of the year and are able to respond to our clients' calls rapidly.

Being pro-active and investing positively in an integrated pest management solution tailored for your business will ensure you stay one step ahead of regular audits, minimise potential expense in the future and avoid disruption that can often be caused by the smallest of issues.

Proofing

We have extensive expertise in pest proofing, fitting and servicing of electronic fly killers (EFK), removal of bird guano, installation of bird netting and various additional prevention and cleaning techniques. Please ask one of our team for a consultation.

We also offer biologist visits and catch tray analysis to measure effectiveness and find the root cause of a particular problem specific to the nature of your business. We have the services of a fully qualified Entomologist available to ensure the correct species are identified from the beginning - resulting in the most effective treatment.

Legal requirements

Many businesses must comply with the Food Safety Act and BRC regulations and it is reassuring for our clients, that our technicians have held senior in-house roles in many sectors, including enforcement. Our technicians have all the technical knowledge and experience as well as in-depth understanding of the challenges to ensure our clients' businesses meet the strict requirements through a bespoke plan. We aim to work pro-actively with all our on-going clients to integrate robust pest management systems.

Expertise

All our technicians have extensive experience (BPCA/RSPH Level 2 minimum) and are fully trained in Food Safety and Health & Safety with continuous updates. We are also members of the British Pest Control Association.

Specific sectors of expertise:

Manufacturing

We understand hygiene and cleanliness standards can never be compromised and that you must always be in a position to prove to customers that your premises and processes are impeccable. We have extensive experience from within a manufacturing environment as well as the auditor's viewpoint and as such are fully versed on the requirements of BRC audits to offer specific advice to ensure you comply.

Hospitality/Catering/Retail

Running a restaurant, café, take-away or sandwich shop can be challenging enough without the added distraction of ensuring you have the correct measures in place to satisfy the relevant authorities and keep employees and customers safe.

Facilities Management

Regardless of scope, size or nature of your operation, if you manage a portfolio of rental accommodation or commercial premises, our smartly presented technicians are experienced in working alongside many businesses to deliver their corporate programme in multiple outlets.

Healthcare

Hygiene is paramount in the healthcare sector where a sterile environment for patient treatment accommodation is required 100% of the time. Yet, as with any active building it is inevitable that the threat of pests is still present, which is why we enjoy a number of long standing contracts with organisations in the health sector providing pro-active measures to prevent and control pest related issues. We are also particularly aware of the need for a rapid response to any reported incident to prevent alarm to patients, staff or visitors.

Residential

We have undertaken many one-off visits to residential properties requiring treatment to a variety of pests and also specialise in house clearances, full removal and safe disposal of waste followed by a thorough property disinfection.

“I have always had a fast and efficient service from FoodSafe. They offer solutions and advice to solve our pest problems. They are quick to respond to our needs and always give us a high priority, as we have a doctors surgery and children's centres. The technicians are always very polite and deal in a professional manner. I have no hesitations in recommending them to other businesses.”
